Please **respect our license terms** by **not *sharing*** or selling the files or prints.

**Commercial licenses are available** if you want to print and sell the terrain.

## KEY CONCEPTS

The Tunnels LED Upgrade can be integrated with LEDs without any wiring. They are used in the same way as standard bulkheads in the Underground Tunnels terrain set.

Note that these bulkheads can be used as 'multilevel support' bulkheads (see underground tunnels instructions for more information).

You need:

- 5mm LED
- CR2032 Battery (3v)
- Wire Cutters
- Battery Caddy model
- Emitter Model

### How to use

1. Print the required models and prepare the parts, then clip the LED legs to a desired size (optional)
2. Place the battery inside the caddy, then insert the battery LED legs into the round hole with its legs either side of the battery. NOTE if the LED does not light up, swap the orientation.
3. Slide the battery caddy with lit LED into the top of the bulkhead
4. Slide your LED bulkhead into the Underground Tunnel frame in the usual way.
