Key concepts

This set introduces more variety in the options and shapes of platforms

Platforms are placed on top of junctions by aligning their holes to the pegs on the top of junctions

Note – The Freestanding pillar from the ‘Crossbeams & Pills’ kit allows more options for supporting & connecting the platforms.

See the DarkHyve Assault CORE SET instructions for more general usage guides.

Options for pegs or flat

Platforms have multiple options which include those with/without pegs for stacking more levels. All platforms have holes underneath.

Parts

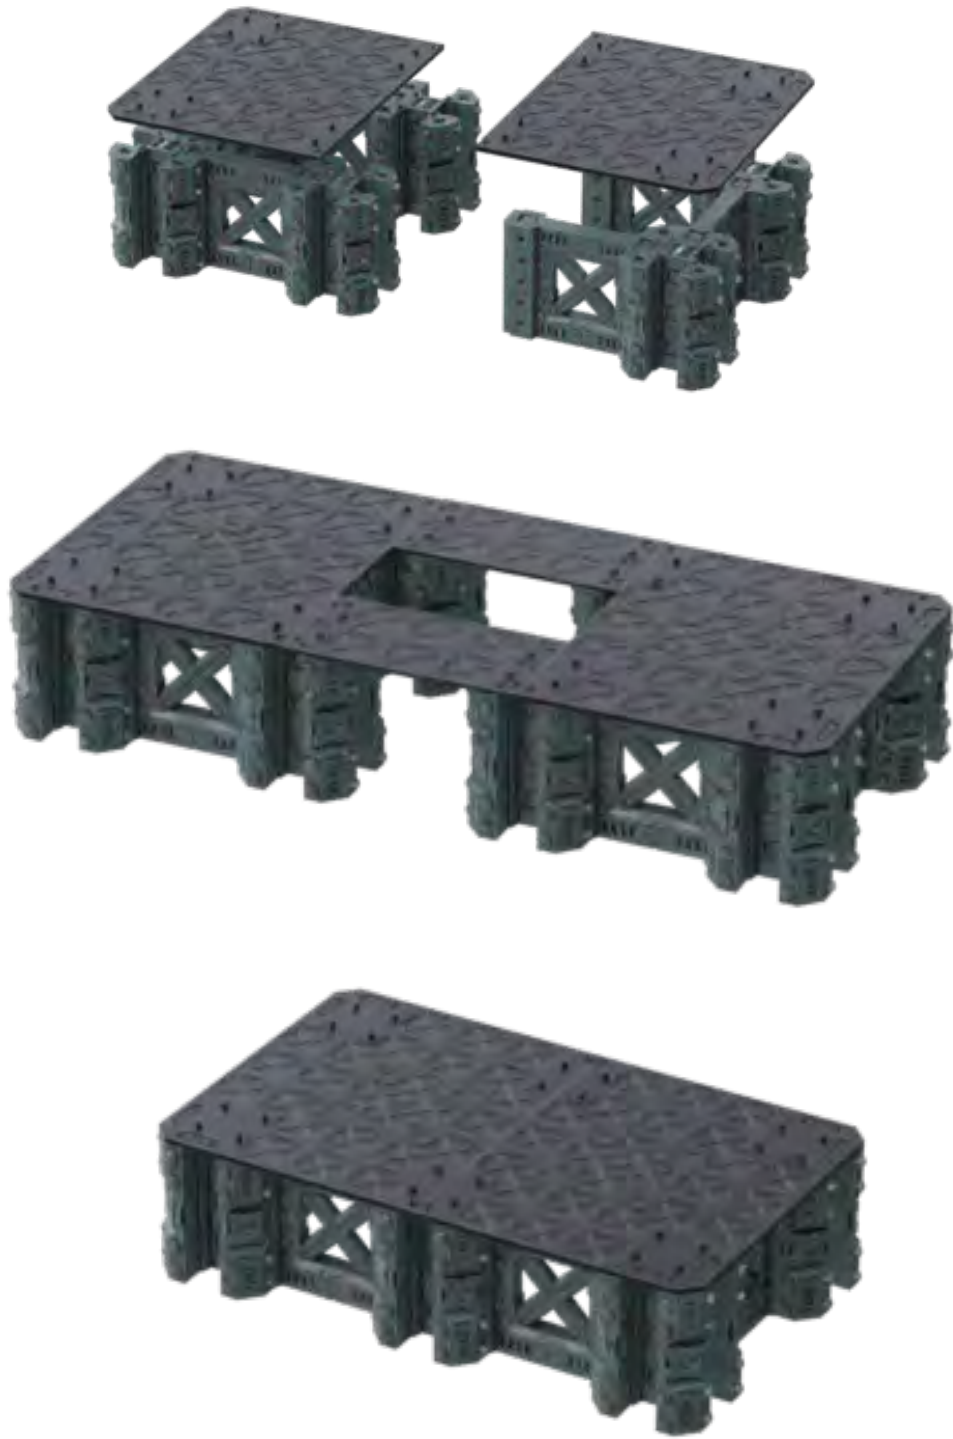

Floor A

These are large platforms that match the larger junction thickness. They have a galpon one side to allow you to double them up into an even bigger platform, or use a Platform Filler to add railing, piping, walkways or crossbeams.

Floor B

These span a standard 'square' build but have indented edges so they are less 'blocky'

Floor C

These are similar to Floor C platforms but do not have the indent.

Floor D

These are essentially 'quarter' or 90 degree corner platforms, as they have two of the sides shortened to allow for filling with platform fillers or extending with other platform/floors.

Floor E

These are essentially extenders for big platforms to Floor A sections OR long standalone platforms that are filled on TWO sides only with platform fillers, walkways or crossbeams.
